The production of 5-hydroxymethylfurfural (HMF) from sugars dehydration is an alternative for obtaining starting materials for the production of polyesters, polyamides and polyurethanes, due to the development of the new materials not derived from petroleum. Synthesis of 5-Hydroxymethylfurfural from Dehydration of ... - 1,1-Dimethylhydrazine is primarily used as a high-energy fuel in military applications and as a rocket propellant and fuel for thrusters. Acute (short-term) inhalation exposure of humans to

1,1-dimethylhydrazine results in nose and throat irritation, mild conjunctivitis, nausea, and vomiting.
